

NOIR

NOIR RISK LETTER

November 2015

To Whom It May Concern,

Please file named Noir risk list for a current list of Noir products that may be more susceptible to warping, cracking, or shrinking, and may not be suitable for all clients. When introducing our products to new clients, please inform them that our furniture pieces are constructed of solid wood, and therefore can still react to local climate and conditions 4-5 months after receipt.

If at any time you need suggestions for items suitable to your clients locations, please do not hesitate to contact us. Please also keep in mind that solid wood will be affected by variations in local humidity along with increased temperature changes indoors during the winter season. Be aware that solid wood furniture is also very susceptible to sunlight. If exposed to continued sunlight the item will crack/split in time.

We appreciate your continued support of Noir and hope this list will help in keeping your clients happy.

Best regards,
