CLEANING & CARE

To highlight the natural characteristics, most items are lightly sealed or waxed. The use of placemats and coasters are recommended at all times.

Wood - Clean with a damp cloth. Do not use abrasives, chemical cleaners or furniture polish to maintain or clean the item. Using any cleaner other than water may reduce the lifespan of the sealant and may result in cracking, lifting or the discoloration of the stain or finish.

Wood with Weathered Finish (WEA) - Lightly dust with a dry, soft cloth.

Metal - Clean with damp cloth. Using abrasives or chemical cleaning agents may result in the deterioration of the sealer, resulting in oxidation or rust.

Stone - Clean with a damp soft cloth. Some stone is absorbent and may stain. Use of abrasives or chemical cleaners may result in surface scratching.

Tanned Leather - Leather can be cleaned using most leather cleaners. Prior to cleaning, apply a small amount to a hidden area. If the item retains the original color, the cleaner can be used. If not, discontinue use.

Raw Leather - Do not clean. All liquids will absorb and permanently stain the leather. Depending to the frequency of use and local conditions, untreated leather will absorb oils, creating a rich patina.

Fabric - Fabrics are not treated with stain resistant chemicals. Applying protective chemicals may result in discoloration of the fabric. Because our fabrics are all natural, liquids will absorb quickly. If a spill occurs, blot the affected area with a damp cloth.

Glass/Crystal - Do not place hot items directly on the surface; use coasters or placemats. Clean with standard glass cleaner.

Fiber Cement - Clean with damp cloth only. Excess water may stain the material.

Depending on the frequency of use, some items may require resealing. Always consult with a furniture professional prior to resealing any item.
